                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             This DNA sequence codes for thermostable esterase Milt (W23072) CC of a new species of Desulfurococcus that grows heterotrophically by Grementation of different organic materials, optimally at 85-88 deg CC cand pH 7.0. It can be amplified from a pBluescript vector by PCR CC (see T79308-09). Claimed, newly identified polynucleotides (T79321-CC 30) encoding esterases (W23069-77, W2308) were recovered from genomic gene libraries. They can be used for recombinant production of the CC enzymes in host cells, and as probes to identify related sequences. The esterases are stable at high temperature and in organic solvents, making them superior for use in production of pure chiral CC compounds used in pharmaceutical, agricultural and other chemical industries. A method is claimed for transferring an amino group CC from an amino acid to an alpha-keto acid using a claimed esterase. The enzymes may also be useful as ripening starters in cheese making, in lignin removal in paper and pulp manufacture, in carbohydrate CC derivative synthesis, in fermentable sugar production from CC lignocallulosic waste, in the study of plant wall structure, plant cresistance to disease and organic matter decomposition and to select plants bred for production of highly degradable animal feeds.

```

Two and

human bacterial artificial chromosome (BAC) clones that included flanked the human CTLA-4 locus were cloned and sequenced. The uence data was assembled into a contiguous sequence that is presented

sequence

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                CC in A96363-68. A96363-64 comprise BAC clone 22700, and A96365-68 comprise CBC BAC clone 22608. The sequences contain polymorphic microsatellite repeat CC (PMR) sequences. The specification describes a method for determining the predisposition of a human subject to develop autoimmune disease. The cCC CTLA4 gene of the human costimulatory receptor gene locus (hCGRL). PMR cCC certa4 gene of the human costimulatory receptor gene locus (hCGRL). PMR cCC sequences vary in length among individuals and can be amplified to compare the products that differ in size. These products can then be ccc detected by rapid and convenient high resolution processes. The method is useful for determining the predisposition of insulin-dependent cc diabetes mellitus (IDDM), Addison's disease, Graves disease, autoimmune hypothyroidism, myasthenia gravis, thymoma, lupus, thyroiditis, rheumatoid arthritis, Hashimoto's disease, coeliac disease and leprosy. PMR sequences within hCRGL are useful as markers in a variety of assays and in the field of forensic medicine, cc disease diagnosis and human genome mapping.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The present invention describes a method for monitoring differential expression of genes in a first filamentous fungal (FF) cell relative to expression of the same genes in one or more second filamentous fungal cells. The method uses fluorescence-labeled nucleic acids isolated from the FF cells and a substrate of expressed sequence tags (EST). The ESTs are used in the methods for monitoring differential expression of genes in a first filamentous fungal (FF) cell relative to expression of the
                                                                                                                                                                                                                                                                                                                                                                        Sequence 724
                                                                                                                                                                                                                                                                                                                                                                                                                                   specifically claimed in the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Claim
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              substrate of expressed sequence tags

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     plant-plant interactions. Nucleic acids encoding chicory germacrene A synthases A and B are useful for the production of transgenic plants with modified sesquiterpenoid synthase activity. Reduction of germacrene A synthase expression (e.g., via the use of antisense sequences) can be used to reduce bitter flavours in crops, thus increasing their commercial value. Increased germacrene A synthase expression may be used to obtain increased formation of sesquiterpene lactones with desirable properties (e.g., medicinal properties), and to obtain increased formatrene A-derived flavour and fragrance compounds or better lactored.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  a 558 amino acid chicory germacrene A synthase ("short") chicory germacrene A synthase ("short") chicory germacrene A synthase sto a 1755 nucleotide ("short") chicory germacrene A synthase cDNA (A97448) and to its encoded product, the 583 amino acid germacrene A synthase A (B23174). Germacrene A synthases plays a key role in the biosynthesis of sesquiterpene lactones, catalysing the formation of a germacrane biosynthetic precursor from farnesyl diphosphate (FDP). Sesquiterpene lactones are bitter-flavoured plant products which provide resistance against insects, nematodes, microorganisms and vertebrate herbispose and as nesets included in
